2017 Consumer Confidence Report

Water System Name:	Hidden Valley Lake Community Services	Report Date:	6/5/2018
	District		

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2017 and may include earlier monitoring data.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.

Type of water source(s) in use:	Wells							
Name & general location of source(s): Wells 2,3 and 4 immediately South of Putah Creek, in Coyote Basin								
Drinking Water Source Assessmen	t information: n/a							
•								
Time and place of regularly schedu	aled board meetings for public participation: Monthly, on the third Tuesday at 7pm,							
At the Hidden Valley Lake Commu	unity Services District Boardroom							
For more information, contact: De	ennis White, Utility Supervisor Phone: (707) 987-9201							

TERMS USED IN THIS REPORT

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (U.S. EPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: State Board permission to exceed an MCL or not comply with a treatment technique under certain conditions.

Level 1 Assessment: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an *E. coli* MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (µg/L)

ppt: parts per trillion or nanograms per liter (ng/L)

ppq: parts per quadrillion or picogram per liter (pg/L)

pCi/L: picocuries per liter (a measure of radiation)

SWS CCR Form Revised January 2018

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, and 6 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old. Any violation of an AL, MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

Please note: The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data, though representative, are more than one year old.

TABLE 1 –	TABLE 1 – SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA										
Microbiological Contaminants (complete if bacteria detected)	Highest No. of Detections	No. of Months in Violation	MCL	MCLG	Typical Source of Bacteria						
Total Coliform Bacteria (state Total Coliform Rule)	(In a mo.)		1 positive monthly sample	0	Naturally present in the environment						
Fecal Coliform or <i>E. coli</i> (state Total Coliform Rule)	(In the year)		A routine sample and a repeat sample are total coliform positive, and one of these is also fecal coliform or <i>E. coli</i> positive		Human and animal fecal waste						
E. coli (federal Revised Total Coliform Rule)	(In the year)		(a)	0	Human and animal fecal waste						

(a) Routine and repeat samples are total coliform-positive and either is *E. coli*-positive or system fails to take repeat samples following *E. coli*-positive routine sample or system fails to analyze total coliform-positive repeat sample for *E. coli*.

TABLE 2	TABLE 2 – SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER										
Lead and Copper (complete if lead or copper detected in the last sample set)	Sample Date	No. of Sample s Collect ed	90 th Percentile Level Detected	No. Sites Exceeding AL	AL	PHG	No. of Schools Requesting Lead Sampling	Typical Source of Contaminant			
Lead (ppb)	8/12/15- 12/23/15	20	ND	0	15	0.2	0	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits			
Copper (ppm)	8/12/15- 12/23/15	20	.29	0	1.3	0.3	Not applicable	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives			

	TABLE 3 – SAMPLING RESULTS FOR SODIUM AND HARDNESS										
Chemical or Constituent (and reporting units) Sample Date Date Detected Range of Detections MCL PHG (MCLG) Typical Source of Contaminant											
Sodium (ppm)	1/29/15; 4/15/15	6.9	6.4-7.4	none	none	Salt present in the water and is generally naturally occurring					
Hardness (ppm)	1/29/15; 4/15/15	205	200-210	none	none	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring					

TABLE 4 – D	TABLE 4 – DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD										
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant					
Gross Alpha Particle Activity	3/30/16	.887	.887	15	(0)	Erosion of natural deposits					
Aluminum (ppm)	4/18/12	<0.05	-	1	0.6	Erosion of natural deposits; residue from some surface water treatment processes.					
Antimony (ppb)	4/18/12	<0.006	-	6	20	Discharge from petroleum refineries; fire retardants; ceramics; electronics; solder.					
Arsenic (ppb)	4/18/12	<0.002	-	10	2	Erosion of natural deposits; runoff from orchards; glass and electronics production wastes.					
Asbestos	3/30/16; 4/29/16	ND	ND	7	7	Internal corrosion of asbestos cement water mains; erosion of natural deposits,					
Barium (ppm)	1/29/15	.12	.12	1		Discharges of oil drilling wastes and from metal refineries; erosion of natural deposits.					
Beryllium (ppb)	4/18/12	<0.001	-	4	2	Discharge from metal refineries, coal-burning factories, and electrical, aerospace, and defense industries.					
Cadmium (ppb)	4/18/12	<0.001	-	5	1	Internal corrosion of galvanized pipes; erosion of natural deposits; discharge from electroplating and industrial chemical factories, and metal refineries; runoff from waste batteries and paints.					
Chromium (ppb)	3/8/17; 5/31/17	14.57	9-21	50	0.04	Discharge from steel and pulp mills and chrome plating; erosion of natural deposits.					
Hexavalent Chromium (ppb)	3/8/17; 5/31/17; 9/18/17; 12/6/17	14.75	5.7-22	11	0.02	Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing facilities; erosion of natural deposits.					

 $^{^{1}\ \}text{There is currently no MCL for hexavalent chromium. The previous MCL of 0.01 mg/L (1ppb) was withdrawn on September 11, 2017}$

Flouride (ppm)	4/18/12	.15	.1015	2.0	(11)	Erosion of natural deposits; water additive that promotes strong teeth; discharge from fertilizer and aluminum factories.
Mercury [inorganic] (ppb)	4/18/12	<0.001	1	2	1	Erosion of natural deposits; discharge from refineries and factories; runoff from landfills and cropland.
Nickel (ppb)	4/18/12	<10	-	100	12	Erosion of natural deposits; discharge from metal factories.
Nitrate (as nitrate, NO3) (ppm)	12/13/17	1.92	.75-2.6	45	45	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits.
Nitrite (as nitrogen) (ppm)	12/13/17	<.4	<.4	1	1	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits.
Perchlorate (ppb)	3/30/16	<4	<4	6	1	Perchlorate is an inorganic chemical used in solid rocket propellant, fireworks, explosives, flares, matches, and a variety of industries. It usually gets into drinking water as a result of environmental contamination from historic aerospace or other industrial operations that used or use, store, or dispose of perchlorate and its salts.
Selenium (ppb)	4/18/12	<5	,	50	30	Discharge from petroleum, glass, and metal refineries; erosion of natural deposits; discharge from mines and chemical manufacturers; runoff from livestock lots (feed additive).
Thallium (ppb)	4/18/12	<1	1	2	0.1	Leaching from ore-processing sites; discharge from electronics, glass, and drug factories.
Endothall	3/30/16	<45	<45	100	94	Runoff from herbicide use for terrestrial and aquatic weeds; defoliant.
Total Trihalomethanes	8/21/17	6.4	6.4	80	n/a	By-product of drinking water disinfection
Haloacetic Acid	8/21/17	<1	<1	60	n/a	By-product of drinking water disinfection

TABLE 5 – DE	TABLE 5 – DETECTION OF CONTAMINANTS WITH A <u>SECONDARY</u> DRINKING WATER STANDARD										
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant					
Color	4/18/12	10	3-10	15	n/a	Naturally-occurring organic materials					
Methyl-tert-butyl ether [MTBE] (ppb)	10/25/13	ND	-	5	n/a	Leaking underground storage tanks; discharge from petroleum and chemical factories					
OdorThreshold (units)	4/18/12	<1	0	3	n/a	Naturally-occurring organic materials					
Turbidity	4/15/15	.3	.3	5	n/a	Soil runoff					
Zinc (ppm)	4/18/12	<0.05	-	5	n/a	Runoff/leaching from natural deposits; Industrial wastes					
Total Dissolved Solids (ppm)	1/29/15; 4/15/15	225	220-230	1000	n/a	Runoff/leaching from natural deposits					
Specific Conductance (μS/cm)	3/30/16	450	450	1600	n/a	Substances that form ions when in water; seawater influence					
Chloride (ppm)	4/15/15	5.4	5.4	500	n/a	Runoff/leaching from natural deposits; seawater influence					
Iron	4/18/12	<100	-	300	n/a	Leaching from natural deposits; industrial wastes					

Manganese (ug/L)	4/18/12	<20	-	50	n/a	Leaching from natural deposits
Sulfate (ppm)	1/29/15; 4/15/15	14	13-15	500	.5	Runoff/leaching from natural deposits; industrial wastes

	TABLE 6 – DETECTION OF UNREGULATED CONTAMINANTS										
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	Notification Level	Health Effects Language						
Bicarbonate Alkalinity	1/29/15; 4/15/15	220	220	None	n/a						
Calcium	1/29/15; 4/15/15	13	5-21	None	n/a						
Magnesium	1/29/15; 4/15/15	39	36-42	None	n/a						
рН	1/29/15; 4/15/15	7.75	7.71-7.78	None	n/a						

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead-Specific Language for Community Water Systems: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Hidden Valley Lake Community Services District is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. [Optional: If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants.] If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4701) or at http://www.epa.gov/lead.
